User Manual - Specifications

ZERO-OHM System is a passive device that interconnects between any amplifier and multiple loudspeakers without the concerns of amplifier speaker loads, impedance and extremely long cable runs.

This Patented Design **eliminates** the need for 70V-100V transformer products.

Multiple loudspeakers can be wired in a parallel connection to impedances below one (1) Ohm.

Features

- Zero (0) Ohm functionality
- No Transformers required
- Multiple loudspeakers can be connected in parallel
- Any Speaker impedance can be used: 2/4/8/16 Ohm
- Uniform power distribution over long distance cable runs
- Full range frequency response
- Identical Output Phase relationship with all Power Amplifiers

Applications

- Amusement Parks • Shopping Malls • Hotels • Airports •
- Amusement Parks • Stadiums •
- Cinemas • Banquet Halls • Cruise Ships • Outdoor Malls • Hospitals
- Restaurants • Warehouses •
- Universities • Water Parks • Bars
- and more.
